# A Better Way of Learning

*"The tutorials have allowed my district to literally offer a technology training on demand program. The tutorials allow everyone to work at an appropriate level at their own pace and they provide immediate feedback regarding their progress. District trainers can now focus on technology professional development that addresses the application of software programs in the teaching and learning process"*

C. Dean  
Bridgeport, CT

## On-Demand Courseware - Engaging Interactive Environment

Discover an engaging, more efficient way of getting people trained. Our fully interactive tutorials immerse users in a media rich learning experience that features voice and text based instruction. Learn at your own pace, in your home, office or classroom, without spending the high costs associated with other forms of training.

Each interactive tutorial is approximately 3 hours long and is usually divided into 3 lessons. This format is ideal for the classroom environment as a single lesson can be easily completed during a single session.

Because the tutorials are fully interactive, users will be asked to perform actions throughout each lesson. An extensive help system provides multiple levels of feedback and ensures that users can never become lost or stuck. Comprehensive lesson tests enable users to quickly gauge retention levels and review topics related to missed questions.

Finally, a powerful open source Learning Management System affords managers the capability to easily monitor learner participation and results across a geographically diverse enterprise.
